

Packages in Go

PACKAGE SYNTAX

```
package pkg
```

```
// code
```

PACKAGE STRUCTURE

package network

tcp.go

udp.go

network.go

package main

main.go

start.go

init.go

PACKAGE TYPES

■ **main (executable)**

```
go run *.go
```

```
go build -o exec
```

■ **non main (non executable)**

```
import "github.com/gophertuts/go-basics/pkg"
```

PACKAGE NAMING & STRUCTURE

 src/network	
<code>package network</code>	
 src/net	
<code>package network</code>	
 src/net_err	
<code>package net_err</code>	
 src/netErr	
<code>package netErr</code>	
 src/utls	
<code>package utls</code>	

 src/pkg	
 src/sub_pkg	
 src/sub_pkg	
 src/sub_pkg	
 src/network	
network.go	
tcp.go	
udp.go	

PACKAGE IMPORTS

```
package pkg
```

```
import "github.com/gophertuts/go-basics/net"
```

HOST

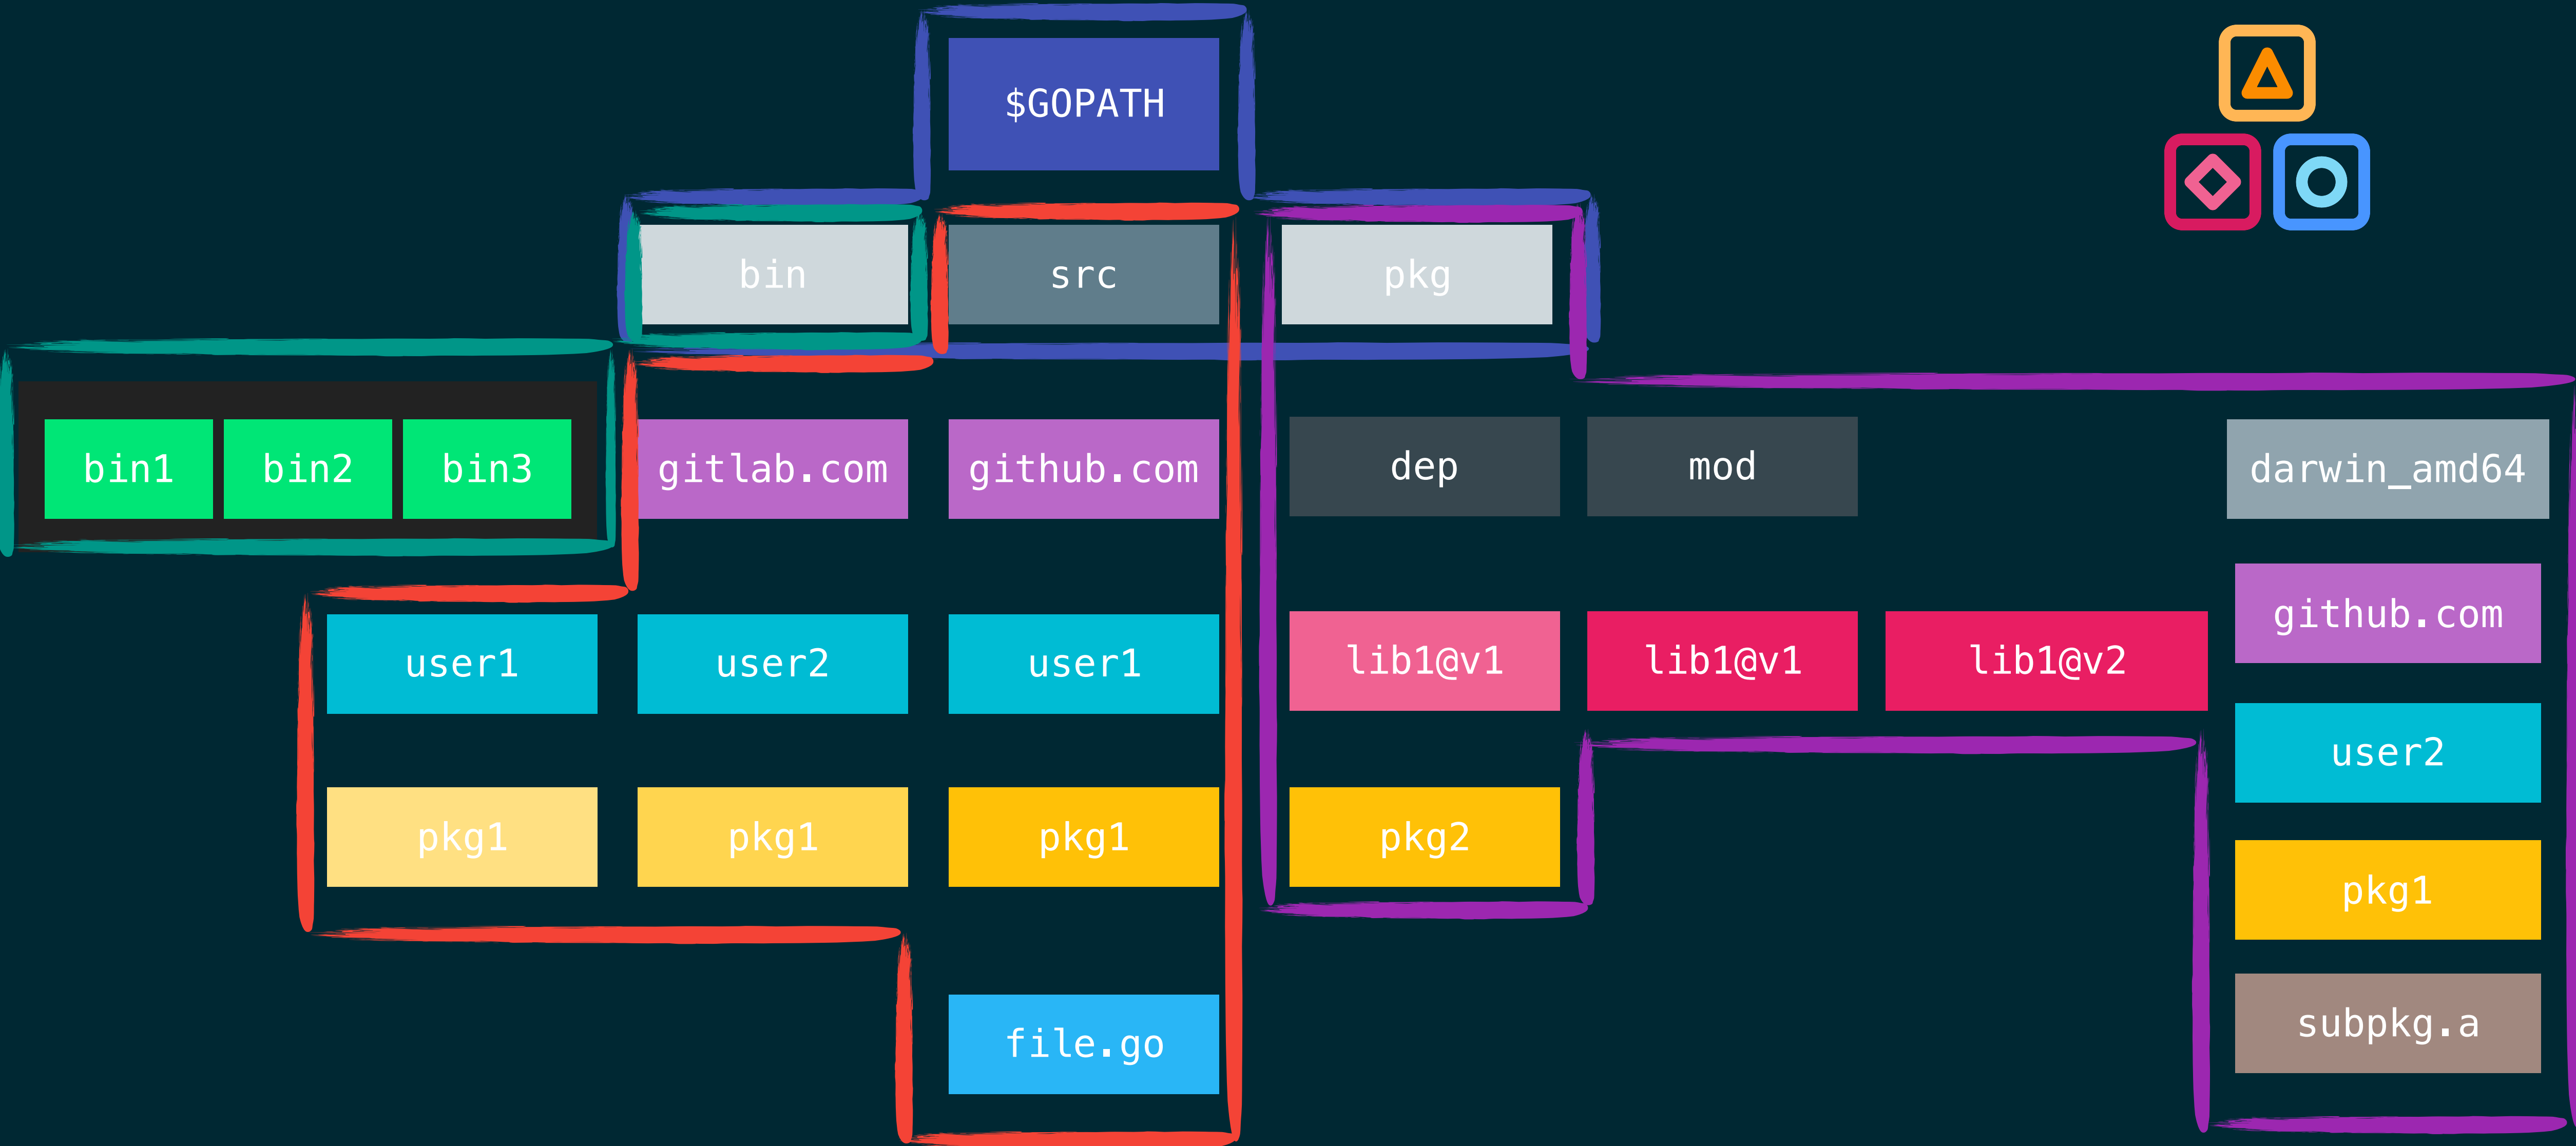

USER/ORGANIZATION

PROJECT/REPO

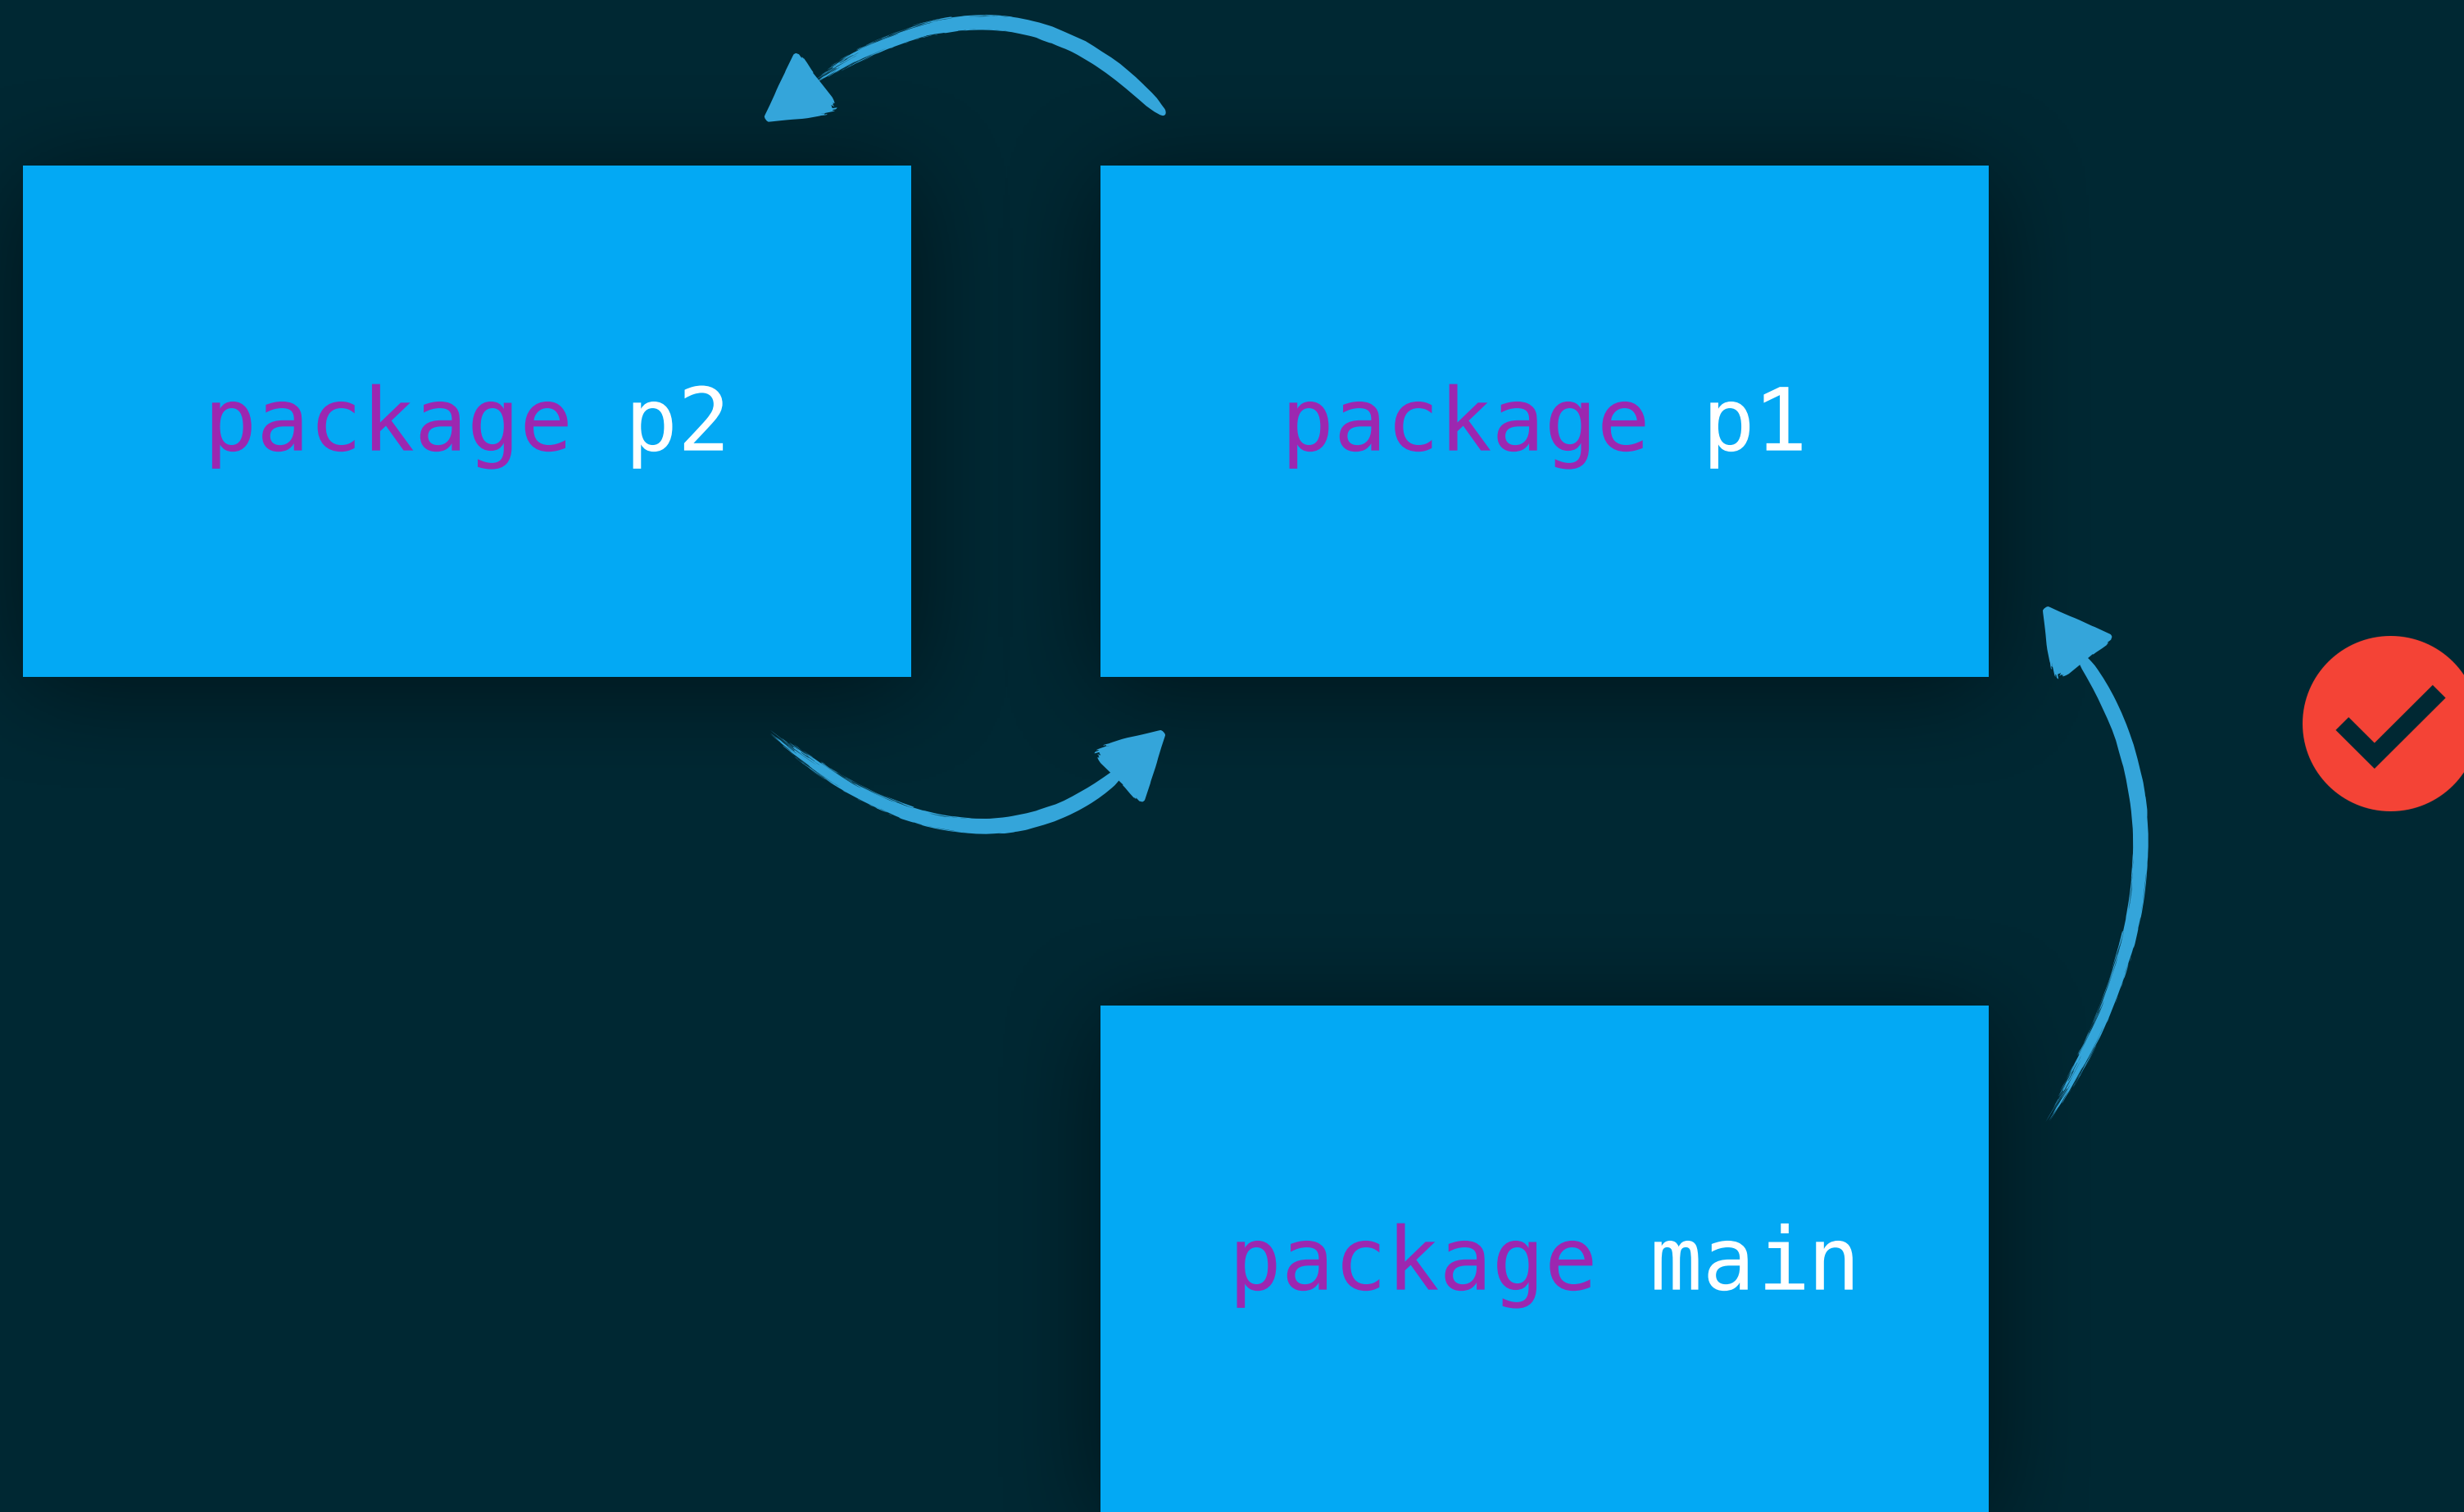

PACKAGE

\$GOPATH

CROSS REFERENCE

FILE GLOBALS & LOCALS

Locals

package name

imports

Globals

constants

variables

functions

TEST FILES

p1_test.go

package p1

p2_test.go

package p2

PACKAGE VISIBILITY (SCOPE)

Exported

Visible & accessible in all files
of the same package

unExported

Visible & accessible inside the package, and
inaccessible outside of it

GO GET

github.com

steevehook

repo

`$GOPATH/src`

```
go get ./...
```
